

## 8.8

### Learning From Focus on Five

Instructions: Describe insights from the data on selected students as a way to gain insights for supporting every student.

1. Before the lesson, what did you perceive to be the specific learning needs of this student related to the learning objectives?
2. In looking at the data that was gathered, what successes and what struggles did this student encounter in the lesson?
3. What structures or strategies were in place that seemed to best support each child's learning? What strategies were not effective?
4. To what extent did these students do the following:

*Learn the objectives*

*Persevere in solving the problems*

*Participate in and contribute to the mathematical community*

5. What next steps might you take to address any or all of the items listed in #4?
6. What are you learning about making the content accessible, challenging, and meaningful for the selected students? For all students?
