# Resource C

# Success Criteria for Building a Culture for Coaching

# Members of the school community engage in behaviors that demonstrate collective efficacy.

#### Success Criteria:

- We avoid labeling students as low achieving. This means we are prepared to respectfully address incidences when our colleagues label students as low achieving.
- We see ourselves as having what it takes to be successful.
- We are not adversarial or competitive with one another.
- There is a platform for sharing successes, such as in faculty meetings, in a weekly bulletin, in grade-level meetings, in department meetings, etc.
- Certain teachers aren't favored over others. Rather, the successes of all teachers are shared.

### Collaboration processes are rooted in student evidence.

#### Success Criteria:

- Collaboration, involving such groups as PLCs, data teams, departments, and attendees of grade-level meetings, includes analysis of student evidence or other forms of assessment data.
- Throughout day-to-day instruction, students engage in tasks that make their thinking visible. These are the formative assessments that are used during collaboration.
- Coaching cycles involve the continuous collection of student evidence.
- Student evidence is compared to the learning targets, or success criteria, to identify gaps in student performance and determine next steps for instruction.

# School improvement is focused on one area of improvement at a time.

#### Success Criteria:

- There is a clear and well-understood focus of improvement.
- The learning focus is data driven and is captured in a well-organized school improvement plan.
- Teachers have a voice in determining the learning focus.
- Coaches support the learning focus through coaching cycles and other collaborative processes.
- Professional learning is differentiated for teachers based on their needs as well as the needs of their students.
