

A WINNING STREAK

$$3.9 + \underline{\hspace{2cm}}$$

Materials: 10-sided “tenths” die (consider the whole numbers to be tenths); or digit cards (0–9); or deck of cards with jacks and kings removed (queens = 0 and aces = 1); two different colored counters

Directions: Take turns. On your turn, roll the die or draw a card. Add that number to 3.9. Place your marker on one of the spaces with that sum (if you get a 0, 0.1, or 0.2, you lose your turn). Three in a row scores 5 points; four in a row scores 10 points; and five in a row scores 20 points. High score wins!
